Subject: Pressure Relief Valve Wire Removal

To improve the customer installation experience, Mueller Pressure Relief Valves will no longer be fitted with an external outlet union wire.

Legacy Valve with
External Wire

Wire Removed

Benefits of this design change are as follows:

- Removes an external obstruction during installation efforts.
- An unintentionally broken wire can no longer void the factory warranty.
- Removal of the wire does not affect valve function.
- Internal components are still assembled into a permanently fixed position that satisfies all tamper-evident and tamper-proof requirements by preventing adjustment to the original factory setting.
- Certifications remain unchanged.

Please contact your Mueller Sales Representative if you require further information.
