## **TECHNICAL BULLETIN**

April 22, 2025

Mueller Refrigeration, LLC is committed to providing components that meet the highest industry standards for safety and performance.

We are issuing this technical bulletin to clarify the applicability of UL 60335-2-89 certification for our products.

UL 60335-2-89 is a safety standard specifically designed for complete commercial refrigerating appliances and ice-makers with incorporated or remote refrigerant units or motor-compressors.

As a valve manufacturer, Mueller Refrigeration, LLC does not produce complete refrigeration systems, therefore, UL 60335-2-89 certification is not applicable.

Instead, many of our valves are certified to the following component-specific standards, ensuring their suitability for use in refrigeration systems, including those that may require compliance with UL 60335-2-89:

- UL 207: Standard for Refrigerant-Containing Components and Accessories, covering the safety and performance of our valves in refrigeration applications.
- UL 429: Standard for Electrically Operated Valves, ensuring the reliability and safety of our valves with electrical components.

Please contact your Mueller Sales Representative for further information.
